***Election/Restriction***

1. An election of claims 17-22 has been acknowledged. An embodiment directing to claims 9-16 is different from an embodiment directing to claims 17-22, thus, it is believed the election/restriction requirement is maintained. Claims 9-16 have been withdrawn from consideration.

***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2871

3. Claims 17-22 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims of U.S. Patent No. 6671017. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present claims are broader than in scope than the patented claims.

Both the application and the patented claims recite a liquid crystal display device comprising a liquid crystal cell including a pair of transparent substrates with orientation layers deposited on inner surfaces thereof; and a liquid crystal layer of liquid crystal material injected between the substrates; biaxial compensation films provided on at least one outer surface of the liquid crystal cell, the biaxial compensation films including an optical dielectric material layer; and polarization plates provided on outer surfaces of the biaxial compensation films, wherein a retardation value of one of the biaxial compensation films is  $-R_{LC}/2 + 30 \text{ nm}$  ( $R_{LC}$  is set as a phase retardation value of the liquid crystal layer).

The patented claim recites hybrid C plate compensation films formed between the liquid crystal cell and the biaxial compensation films.

The patented claim recites biaxial compensation films having a negative anisotropy.

The patented claim recites a predetermined distance about 6  $\mu\text{m}$ .

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2871

Lyu ('701) discloses an LCD device comprising c-plates and biaxial plates. Lyu discloses a retardation value of one of the biaxial compensation films not meeting  $-R_{LC}/2+30$  nm ( $R_{LC}$  is set as a phase retardation value of the liquid crystal layer).
